

Agile Scrum Meeting

In this meeting, we discussed the progress we have made and what our next step is. We also tried to assign rough assignment to each member of our group. We went around asking ourselves three questions below.

1. What have you completed since the last meeting,
2. What will you complete before the next meeting, and
3. Describe any obstacles or roadblocks you face.

Natnael:

I've worked with my team on discussing and completing milestone two. For our next meeting I'll be working on a portion of our front end page using html. My obstacles would include school homework and study, but I'll try my best to get my task completed.

Tenzin:

I wanted to work on user login page and sign up page. So far, I have rough layout of what the login is going to look like. I also have a simple create account form. Before next meeting, I would like to try to work on how to get user data and store in a data. I also need to learn how to implement in Django. My challenge is how to relate Django with MySQL, html, and NodeJs.

Zihan:

I've worked with my team about milestone 2 and some ideas of our project last week. I've been reading several tutorials about django and html since last meeting. I'm still practicing and trying something new with django tables and drag, but I think I will make a great table before next meeting. My challenges is the table in django, it is more difficult than what I expected but I think I'm in good shape.

Long:

I've learned a little more about connecting an html page to a server with Django, but that's about it. Before the next meeting I plan on manipulating the data we have so far to fit the variables we will be using to describe the courses from the FCQs. Current obstacles are mainly figuring out how to use Django to connect everything together.

Derek:

I've been focusing on getting django connected to our database, I have that working and now I am working on more of our backend infrastructure for the website. My challenges going forward will be learning how to do more with Django.

Heinz:

I've mostly worked with the team in the creation of milestone two, specifically the high-level overview of the project's requirements. I have also been getting myself acquainted with the tools and programming languages that we plan to use to create our project. Before next meeting I was planning on looking into how we will encrypt the login information of our users, as well as figuring out how their data will be stored. I think the challenge that I am most likely to face is the balancing of this project with other tasks, such as homework and midterms. However, I plan to lay out a schedule for the upcoming week so that I can get everything done on time.
